Instructions for use

Self-Eth Adhesive System for Enamel and Dentin

Professional use only

Read all the instructions carefully before using the product. Keep for later reference until the final completion of the product and its use.

Product description

Simple Universal Bond is a single bottle self-etching adhesive system (Self-Eth Primer/Conditioner) responsible for the union between the restorative structure (enamel and dentin) and restorative materials. The primer and bonding agent are combined in a single bottle. One drop of acid etchant is applied on both enamel and dentin, it can be used for both restorations made of composite resins and light-curing glass ionomers or for indirect preparations with restorations with resin cement. The product contains MDP, which allows it to be used as a matrix cement.

Simple Universal Bond is made with a combination of different photoinitiators. These react with each other and enhance the curing effect after the light polymerization lamp. This in turn increases the bond strength and minimizes the shrinkage of the adhesive film. Simple Universal Bond is colorless and its color contributes to high aesthetics.

Product presentation

Simple Universal Bond is supplied in two 15 ml and one 30 ml syring. The syring with the applicator is used for the application of the product. The 30 ml syringe is used for the application of the product on the rest of the product.

Basic Composition

Active ingredients: MDP (10-Methacryloyloxydecyl dihydrogen phosphate), methacrylate monomers, photoinitiators compatible with the light curing UV-A (365-405 nm) which guarantees the quality of the polymer generated and also the quality of the bonding.

BONDING OF RESTORATIVE MATERIALS

Simple Universal Bond is a self-etching primer/conditioner of the product selected by the procedure (composite resins or cement).

Conservation and Storage

Simple Universal Bond is stored in temperature between 5°C and 25°C / 41°F - 77°F

Precautions and Contraindications

Do not use the product on teeth with a restorative filling. Do not use the product after expiration date.

Warnings

Do not use the product after expiration date. In order to dispose the product properly follow your country's legislation. Do not use empty packages. Keep out of the reach of children.
