

OptiBond™ Universal 360

Single Component Universal Adhesive

All Techniques. Any Material. One Bonding Solution. The One for All.

Meet OptiBond Universal 360, the revolutionary new bonding agent that offers the best outcome to every clinician, regardless of what materials they use or which techniques they follow. No matter what your goals are, OptiBond Universal 360 can help your dental practice meet them with ease.

Universal, Multi-Purpose Solution

Powered by Kerr's patented GPDM technology, now enriched with MDP, OptiBond Universal 360 is a truly universal system offering reliable bond strength to all surfaces and substrates, with any resin cement, even in the absence of light. This one-bottle solution offers the flexibility to be used with any etching technique in both direct and indirect restorations.

Exceptional Bond Strength

OptiBond Universal 360 offers equal or superior bond strength results in combination with Kerr and leading competitor cements, even in total dark cure mode, without auxiliary products.

Improved Bottle Delivery

Thanks to the all new ergonomic bottle design, you'll only need one hand for opening, dispensing, and closing. Plus, you can use the dropper to deliver a precise drop size at every application, without worrying about leakage before and after. This leads to less waste and more efficiency.
